SnakTrak

A Web App for Food Sharing

Ben Peterson, Thomas Burton, Chaz Morton, Everett Kirkpatrick

The Brainstorming Phase

- Web Scraper (feed for the internet)

- Website with a few different games

- App to keep track of bills in a shared home

SnakTrack - an app to help individuals in a shared home keep track of food costs

Goals

- **Provide households a means of organizing costs related to shared food.**

- **Develop an appealing and simple user interface**

- **Store user data and present it in a useful format**

# Components

Languages

- EJS 54.6%
- JavaScript 26.7%
- HTML 10.5%
- CSS 8.2%

Technologies

Architecture Diagram

Challenges

- **Docker and PostgreSQL:** difficulty getting into the workflow with the database

- **User Data Continuity:** learning how to harness cookies and session data persistence through different pages in the project

- **Merge Conflicts:** fixing merge conflicts when joining our different code bases

- **Time Management:** delegating tasks to individuals in the group and deciding on deadlines for certain features / updates
